

Oscor's Angios® line of diagnostic catheters features a proprietary HD Braid reinforced shaft which allows for smooth advancement. At the same time, the sheath maintains its curve, allows for a high flow rate of contrast media injection, and has a soft radiopaque catheter tip to minimize vessel trauma. Oscor's Angios® diagnostic catheters are available in a variety of curves, sizes and lengths.

The "Angiography Catheter Kit" consists of three catheters: a Judkins Left 4.0, a Judkins Right 4.0, and either a Straight Pigtail or a Pigtail 145° in a variety of length configurations. *Maximum Recommended Guidewire 0.038"*

	Model / Catalog #	Curve/Length/Model # (3 catheters per kit)	Inner Lumen ID
