PASSIVE FIXATION BIPOLAR PACING LEAD

LATEX-FREE

Petite™ Series Cardiac Pacing Lead

The Petite™ lead represents Oscor's next generation of permanent implantable cardiac pacing leads. The revolutionary design of the Petite™ lead enables a minimal lead body diameter while maintaining maximum reliability. Available in both straight and pre-formed J configurations, Petite™ leads are ideal for either ventricular or atrial placement. With a lead body diameter of 4.8 F and the ability to pass through a 7 F introducer, the Petite™ lead is one of the thinnest bipolar endocardial pacing leads available today. The uniquely designed fixation tines allow for safe and easy fixation of the lead and maximize stability in the heart.

Petite™ Passive Fixation Lead Features:

- Straight and pre-formed J configurations available for ideal placement in the ventricle or atrium
- Hexafilar coil consists of two conductors connected to the anode and two conductors connected to the cathode
- Each set of conductors is separated by a passive, non-electrically active filar for additional safety
- Polyurethane outer insulation is highly reliable for long term implantation while maintaining lead flexibility
- Polaris™ (Iridium Oxide Pt/Ir) coated distal tip featuring low polarization
- Available with steroid eluting ring, dexamethasone sodium phosphate
